Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

Class:- Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: EE411	Course Name: Solar and Wind Energy Systems	2	-	-	2

Course Description:

This course offers a comprehensive exploration of solar and wind energy technologies, emphasizing the principles, design, operation, and integration of renewable energy systems. Students will examine the core concepts of energy conversion, system components, and assess the economic and environmental implications of implementing solar and wind power solutions.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Illustrates basics of solar power generation and associated issues.
2. Examine characteristics and design of various solar PV systems.
3. Analyze wind turbine operation using various control methods.
4. Identify appropriate power electronic converters for solar PV and wind energy systems.
5. Assess technical challenges in integrating renewable systems into power grids.

Prerequisite: Power System, Power Electronics

Course Content		
Unit No	Description	Hrs
1	Fundamentals of Solar Energy and Solar Cell: Introduction to solar energy. Characteristics of Solar Radiation & Radiation Spectrum. Solar Constant. Air mass ratio. Solar radiation measurement & Instrumentation. Types of Solar Cells. Introduction of PERC and Bifacial Solar Panels. Associated issues related to reliability, degradation, and sustainability of solar cells. Solar cells- Energy requirement, Basic operation, construction & concepts.	04
2	Solar Cell Characteristics and PV Systems: Solar cell IV and PV characteristics. Cell efficiency & Fill factor. Effect of Irradiation, Temperature and shading on Solar Panel. Bypass Diode. Principles of Maximum Power Point Trackers. PV Arrays and Modules. Classification of PV Systems - Standalone PV system - Grid Interactive PV System- Hybrid Solar PV system.	04
3	Solar PV System Design and Installation: Balance of Systems (BOS) – Module Mounting Structure, DC cables, DCDB, ACDB, String Junction Box, Inverters, Batteries, Charge controllers, Protection. Design Procedure of Solar PV system. Applicable Standards & Regulations for Grid Connectivity. Islanding and Anti-Islanding, Interconnection Technical Specifications & Requirements. Net Metering and Gross Metering, Introduction of CAPEX and OPEX, Introduction of PVsyst Software	04

4	Fundamentals of Wind Turbines: Power contained in wind. Basic components of a Wind Energy Conversion System (WECS). Types of Wind Turbine. Gearless Turbines. Power speed characteristics - Torque speed characteristics. Wind turbine control systems - Pitch angle control, Stall control, Yaw control, Control strategy. Environmental Impacts of Wind Turbines.	04
5	Wind Power Generation and Power Electronic Interface: Fixed and Variable speed wind turbines. Electrical Power Generators-Self excited vs. Grid connected Induction Generators. Classification of Wind Power Generation Schemes. Advantages of variable speed systems. Controlled firing angle scheme with AC side capacitor-Inverter/converter system with DC side capacitor.	04
6	Grid Integration of Wind Turbine Systems: Grid Connected Induction Generators Operation - Single output system with Fixed speed - Double output system with variable speed. Operation of Grid connected Synchronous Generators. Grid connected Wind Turbine systems – Features and configuration, Grid Interface Requirements. Synchronizing with Grid. Effect of renewables on grid interconnection on power.	04

Class:-Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: EE413	Course Name: Electrical Vehicle	3	-	-	3

Course Description:

This course introduces concepts of electric vehicles, including vehicle architecture, electric propulsion systems, battery technologies, power electronic converters, and charging infrastructure. It covers the operation and performance analysis of electric vehicles, energy storage systems, and basic energy management strategies. The course aims to provide students with the knowledge required to understand modern electric mobility technologies and their integration with the electrical power system.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain electric vehicle architecture and types.
2. Analyse performance of EV and its energy storage systems with BMS.
3. Assess electric vehicle propulsion systems and motor performance.
4. Describe hybrid and plug in hybrid EV powertrain with control techniques
5. Identify appropriate power converters for EV and its charging infrastructure.

Prerequisite: Electrical Machines, Power Electronics and Control System

Course Content		
Unit No	Description	Hrs
1	Introduction to Electric Vehicles: Need for electric mobility, Global EV trends, History and evolution of electric vehicles, EV classification, Comparison with IC engine vehicles, EV architecture and subsystems, Government policies and incentives (India EV policies)	06
2	Performance Analysis of EV: Vehicle dynamics, EV Parameters, Longitudinal Vehicle Model, Longitudinal Resistance, tractive force calculation, Effect of drive cycles on EV performance, Energy consumption estimation, Range calculation, Hybrid energy management strategies in EV.	06
3	Energy Storage Systems: Battery technologies: Li-ion, NiMH, Lead-acid, Battery parameters and characteristics, Battery modeling basics, Battery Management System	06

	(BMS), Battery State Estimation, Alternative Storage: Supercapacitors & Fuel cells	
4	Electric Propulsion System: EV drivetrain configuration, Electric motors for EV: BLDC motor, PMSM, Induction motor, Motor selection criteria, Torque-speed characteristics, Motor Control, Regenerative braking	06
5	Hybrid & Plug-In Hybrid Electric Vehicles: Hybrid Electric Powertrains, series hybrid, parallel hybrid, power split hybrid, Hybrid Powertrain Controls, Plug-In Hybrid Vehicular Architecture, Fuel Economy of PHEVs, power management, component sizing, Control Strategy of PHEV	06
6	EV Charging Infrastructure: Charging standards and levels, Charging Methods and stations, Fast charging and battery swapping, Wireless charging basics, Grid integration of EVs, Vehicle-to-Grid (V2G). Effect of charging station on power quality	06

Class:- Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: EE4034	Course Name : Electrical Drives	3	--	--	3

Course Description:

This course provides an in-depth understanding of the principles, analysis, and control of electrical drive systems. It focuses on the dynamic performance of electric motors, power electronic converters, and control strategies used in modern drive applications.

Students will study various motor drive systems including DC, induction, and synchronous motor drives, along with speed control techniques, torque characteristics, and energy-efficient operation.

The course enables students to integrate concepts of power electronics, control systems, and electric machines to design and analyze advanced drive systems.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Interpret the equivalent parameters, stability and components of load torque for a given motor-load system.
2. Analyze the performance characteristics of DC, and induction motor drives.
3. Evaluate the performance of the power electronic converter and control strategy used for electric drives.
4. Apply mathematical modeling and dynamic analysis techniques to study steady-state and transient behavior of electrical drive systems.
5. Select modern control methods and technologies for advanced applications in electric drives.

Prerequisite: Electrical Machines, Power Electronics, Control Systems

Course Content

Unit No	Description	Hrs
1	Fundamentals of Electrical Drives: Introduction to drives, concept of electrical drive, block diagram of electrical drive, parts of electrical drive, nature of loads and their characteristics, motor-load system, fundamental torque equation, equivalent values of drive parameters, steady state stability of electrical drives, factors affecting choice of electrical drives.	06
2	AC to DC Converter Fed Drives: Introduction, classification, speed control and electric braking of DC Motors, single phase half and full controlled converter fed dc motor drives, dc series motor drives, introduction to four quadrant operation and single phase dual converter fed dc motor drive, three phase half and full converter fed dc motor drive, four quadrant operation and three	06

 Department of Electrical Engineering

	phase dual converter fed dc motor drive, closed loop control of converter fed dc drives.	
3	DC to DC Converter Fed Drives: Introduction, principle, configuration and classification of chopper, one, two and four quadrant chopper fed separately excited dc motors drive, chopper fed series dc motors drive, closed loop control of chopper fed dc drives.	06
4	Stator Side Control Drives: Introduction, speed control and torque-speed characteristic of three phase induction motors, three phase ac voltage controller fed induction motor drive, variable frequency characteristics, V/f control, voltage source inverter (VSI) fed induction motor drive, current source inverter (CSI) fed induction motor drive, comparison of VSI and CSI drives.	06
5	Rotor Side Control Drives: Introduction, conventional rotor resistance control, static rotor resistance control, concept of slip power recovery, slip power recovery schemes, static Kramer drive, static Scherbius drive. Field Oriented Control (FOC) and Direct Torque Control (DTC) of Induction Motor Drive.	06
6	Industrial Applications of Electrical Drives: BLDC motor drives, Electric Vehicles (EVs), Hybrid Electric Vehicles (HEVs), renewable energy-based drives, robotics, and industrial automation systems	06

Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

Class: -Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: EE4054	Course Name: Power System Dynamics and Control	3	-	-	3

Course Description:

This course explores the evolution and structure of modern power systems, emphasizing control methods, operating states, and stability challenges. It covers the analysis of dynamical systems, focusing on equilibrium, small and large disturbance stability, and modal analysis. Students will study the mathematical modeling of synchronous machines, including per-unit representation and transient characteristics. The course also introduces modeling of excitation and prime mover systems, and examines stability issues in interconnected power systems, such as frequency stability, load sharing, and voltage stability.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Analyze the performance of modern power systems
2. Evaluate the dynamic behavior of power systems under small and large disturbances
3. Design mathematical models of synchronous machines.
4. Develop models for excitation and prime mover systems.
5. Critique the stability of interconnected power systems with single and multi-machine systems.
6. Propose advanced solutions for enhancing power system control and stability

Prerequisite: Mathematics for Engineering, Power system analysis, Electrical machines, Control systems

Course Content		
Unit No	Description	Hrs.
1	Introduction to Modern Power Systems and Stability: Evolution of power system, Structure of a power system, power system control, control methods, operating states, control hierarchy, Stability Problems faced by Power Systems. Impact on Power System Operation and Control	06
2	Analysis of Dynamical Systems: Concept of Equilibria, Small Disturbance Stability and Large Disturbance Stability. Example: Single Machine Infinite Bus System. Modal Analysis of Linear Systems. Analysis using Numerical Integration Techniques	06

3	Modeling of a Synchronous Machine: Physical characteristics, Rotor Position Dependent model. Mathematical Modeling of Synchronous Machine, Mutual and self-Inductances D-Q Transformation (Park's Transformation). Model with Standard Parameters. Steady State Analysis of Synchronous Machine	06
4	Per unit representation of synchronous machine: Stator quantities, stator and rotor voltage equations, per unit stator and rotor flux linkage equations, per unit system for rotor, per unit power and torque, equivalent circuits for d-q axis. Synchronous machine under steady state. Transient characteristics of synchronous machine	06
5	Modeling of Excitation and Prime Mover Systems: Physical Characteristics and Models. Control system components, Simplified Representation of Excitation Control, Excitation system, Modeling, standard. Block Diagram,. Excitation System Controllers. Prime Mover Control Systems	06
6	Stability Issues in Interconnected Power Systems: Single Machine Infinite Bus System. Multi-machine Systems. Stability of Relative Motion. Frequency Stability: Centre of Inertia Motion. Concept of Load Sharing: Governors. Single Machine Load Bus System: Voltage Stability. Torsional Oscillations.	06

Class: -Final Year B. Tech.	Semester- VII
Course Code: EE4074	Course Name: HVDC Transmission Systems

L	T	P	Credits
3	-	-	3

Course Description:

This course provides a comprehensive understanding of HVDC transmission systems, including their concepts, design, operation, and control techniques, along with a comparison to HVAC systems.

Students learn about HVDC converters, modulation methods, faults, protection, harmonics, filters, and multi-terminal systems. By the end, they gain essential knowledge for HVDC system design, maintenance, and development.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain HVDC transmission system merits, types, and structure.
2. Analyze HVDC converters and their control strategies.
3. Illustrate various faults and their protection technique in HVDC systems.
4. Design AC and DC harmonic filters to mitigate harmonics in HVDC systems.
5. Elaborate the operating principle, types, and control strategies of MTDC systems

Prerequisite: Power System-I, Power System-II, Power System Protection, Power System Operation and Control, Power Electronics.

Course Content		
Unit No	Description	Hrs.
1	Introduction of HVDC transmission: Historical development, Comparison of HVDC & HVAC transmission system, Type of HVDC links, Converter station structure, Applications of HVDC transmission, Modern Trends in HVDC technology.	06
2	HVDC Converters: Selection of semiconductor valve, Analysis of Line commutated converter – 6 & 12 pulse, Voltage source converter – two & three level, Pulse width modulation techniques.	06
3	HVDC converter control: Principles of DC link control, Converter control characteristics, System control hierarchy, Firing angle control, Current controller, Excitation angle control	06
4	Converter faults and protection: Commutation failure, Arc through, Misfire, Current extinction, Short circuit in bridge, Over voltage in converter station. Protection against overcurrent, Protection against overvoltage.	06

5	Harmonics & Filters: Introduction, Generation of harmonics, Types of harmonics, Impact of harmonics, Mitigation techniques, Design of AC & DC harmonic filters, Active harmonic filter	06
6	Multi-terminal DC (MTDC) system: Introduction, Applications of MTDC system, Types of MTDC system – series and parallel, Control of MTDC system – current margin and voltage limiting control, Protection of MTDC system.	06

Class: - Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: EE4094	Course Name: Nonlinear Control Systems	3	-	-	3

Course Description:

The course deals with analytical tools to analyze nonlinear systems. The course introduces common design approaches for synthesizing nonlinear feedback controllers at the graduate level. The emphasis of the course is on both the practicality and usefulness of different nonlinear feedback controller design methodologies as well as theoretical development, so that the student will have the necessary theoretical background after completing the course

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. List different types of non-linearities present in the system.
2. Analyze non-linear systems using analytical and graphical methods.
3. Comment on the stability of nonlinear systems using various approaches.
4. Apply Lyapunov stability criteria for nonlinear system.
5. Develop mathematical model of real-time nonlinear systems.

Prerequisite: Mathematics - linear algebra, differential equations; Control Systems - linear system, state-space

Course Content		
Unit No	Description	Hrs
1	Introduction to Nonlinear Systems: Review of mathematical preliminaries; Linear vs Nonlinear systems; nonlinear models and characteristics; behaviors of nonlinear systems – frequency-amplitude dependence, jump resonance, subharmonic oscillations, limit cycles, frequency entrainment; common physical nonlinearities and examples.	06
2	Analysis of Nonlinear Systems: Concept of phase plane analysis; phase trajectories; singular points and classification; analysis using phase trajectories; construction of phase trajectories or phase portraits using isocline and delta method; Existence of periodic orbits; Bifurcation.	06
3	Frequency Domain Analysis: Absolute stability, circle criterion; Popov criterion; Describing function; Describing function of nonlinearities like - dead-zone, saturation, relay with dead-zone, backlash; stable and unstable limit cycles; stability analysis; examples.	06

4	Lyapunov Stability: Stability definition and preliminaries; Autonomous systems: stability of equilibrium point; concept of definiteness of functions, positive, negative definite/semi-definite, indefinite functions; Lyapunov function; Lyapunov's stability theorem; stability of periodic solutions.	06
5	Stability Criterion: Linear systems, linearization of nonlinear systems about equilibrium point; Lyapunov's indirect method; stability analysis of nonlinear system using Lyapunov's theorem; stability of periodic solutions.	06
6	Nonlinear Control Design: Feedback linearization; Input-output linearization; full-state linearization; state feedback control; real-time nonlinear systems – mass-spring-damper system, tunnel diode circuit, DC-DC converter etc.; Nonlinear design tools, sliding mode control, Lyapunov redesign, backstepping.	06

Class: Final Year B. Tech	Semester: VII	L	T	P	Credits
Course Code: EE429	Course Name: Power System Operation and Control	3	--	--	3

Course Description:

This course focuses on the principles and techniques used to manage and optimize the operation of electrical power systems. This course deals with load flow analysis, voltage control, frequency control, and economic dispatch economic operation. In addition, this course covers frequency and voltage stability in the power system.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Identify effective tools for economic operation of power system
2. Analyze different power flow methods
3. Model advanced control technique for power system.
4. Justify the need of power system security
5. Apply AI & ML concept to power system

Prerequisite: Basic Electrical Engineering Power system analysis, Electrical Machines

Course Content		
Unit No.	Description	Hrs
1	Economic Operation of Power Systems: Introduction, incremental fuel cost, economic dispatch neglecting transmission losses, transmission loss as a function of plant generation, generation loss formula, and optimum load dispatch considering transmission losses, iterative method of solving coordination equation.	06
2	Load Flow Studies: Network model formulation, formation of Y bus, power flow problem, different types of buses, approximate power flow, Gauss Seidel method, Newton-Raphson method, Decoupled Power flow studies, Fast Decoupled power flow studies, comparison of power flow methods.	06
3	Automatic Generation Control: Single area load frequency control, speed governing system and characteristics, Multi area load frequency control; flat frequency, flat tie-line load and tie-line load bias control.	06
4	Voltage stability and Control: Reactive power and its relation to voltage control, location of voltage control equipment, methods of voltage control, excitation control, voltage regulators, tap changing transformers, induction regulators, reactive power control, short circuit capacity, rotor angle stability and voltage stability, SIL, voltage stability limit.	06

5	Power System Security: Factors Affecting Power System Security, Contingency Analysis, AC Power Flow Security Analysis, Concentric Relaxation, State Estimation.	06
6	Applications of AI & ML in Power Systems: Applications of Neural network-based power system estimators and controllers, Application of ANN for security assessment, Schedule Maintenance of power system using Genetic Algorithm, Energy Market forecasting, Fault identification and localization.	06

Class:- Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code : EE4134	Course Name : High Voltage Engineering	3	-	-	3

Course Description:

Electrical insulation is a fundamental component of modern power system networks. A thorough understanding of their intrinsic properties and the mechanisms responsible for insulation failure is essential for achieving reliable and economical design. In the current competitive energy sector, the growing demand for extra-high-voltage transmission and the tendency to operate equipment close to rated limits necessitate robust design methodologies and stringent testing requirements. As a result, high-voltage insulation technology has advanced considerably, supported by progress in diagnostic techniques, measurement systems, and the development of novel insulating materials.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain the fundamentals of electric field stresses and dielectric materials used in high voltage engineering.
2. Apply ionization and breakdown theories to determine breakdown behavior in gaseous and liquid dielectrics.
3. Analyze breakdown mechanisms in solid and composite insulating materials under practical conditions.
4. Evaluate methods for generation and measurement of high DC, AC, and impulse voltages and currents.
5. Design insulation and testing schemes for electrical equipment based on overvoltage phenomena and insulation coordination principles.

Prerequisite: Fundamentals of Electromagnetics, Electric Power systems, Electrical Measurements

Course Content		
Unit No	Description	Hrs
1	Introduction to High voltage engineering Electric field stresses. Gas/ Vacuum as insulator, Liquid dielectrics. Solids and composites, Estimation and control of Electric stress, Numerical methods for electric field computation. Introduction to Artificial Intelligence and Machine Learning concepts for insulation engineering.	06
2	Breakdown in Liquid and Gases Dielectric materials Gases as insulating media, collision process, Ionization process, Townsend's criteria of breakdown in gases, Panchen's law. Liquid as Insulator, pure and commercial liquids, breakdown in pure and commercial liquids	06
3	Breakdown in Solid Dielectric materials	06

K.E. Society's
Rajarambapu Institute of Technology, Rajaramnagar
(An Empowered Autonomous Institute, affiliated to Shivaji University, Kolhapur)
Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

	Intrinsic breakdown, electromechanical breakdown, thermal breakdown, breakdown of solid dielectrics in practice, Breakdown in composite dielectrics, solid dielectrics used in practice.	
4	Generation & measurement of high voltages and currents Generation of High Direct Current Voltages, Generation of High alternating voltages, Generation of Impulse Voltages, Generation of Impulse currents, Tripping and control of impulse generators. Measurement of High Direct Current voltages, Measurement of High Voltages alternating and impulse,	07
5	Testing of materials & electrical apparatus Measurement of D.C Resistivity, Measurement of Dielectric Constant and loss factor, Partial discharge measurements. Testing of Insulators and bushings, Testing of Isolators and circuit breakers, Testing of cables, Testing of Transformers, Testing of Surge Arresters.	06
6	Over voltages and insulation co-ordination Natural causes for over voltages – Lightning phenomenon, Overvoltage due to switching surges, system faults and other abnormal conditions, AI-based prediction and analysis of lightning and switching overvoltages using system and environmental data. Principles of Insulation Coordination on High voltage and Extra High Voltage power systems.	05

Class: - Final year B. Tech	Semester- VII	L	T	P	Credits
Course Code: EE4154	Course Name: Power Quality and Harmonics	3	--	--	3

Course Description:

This course provides an in-depth understanding of Power Quality (PQ) issues, their impact on electrical systems, and methods for managing and improving power quality. Students will explore key concepts such as voltage quality, voltage sags, and interruptions and harmonics and mitigation techniques.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain standard definitions and evaluation procedures for electrical power quality.
2. Apply the fundamental principles of protection for voltage sag
1. Evaluate various power Quality solutions.
2. Analyze the effects of Harmonics on Power systems.
3. Suggest suitable harmonic mitigation solutions

Prerequisite: Power system, Electric Circuit Analysis and Mathematics.

Course Content		
Unit No	Description	Hrs.
1	Introduction to Power Quality: Voltage quality, power quality evaluation, procedures, term and definitions: general classes of power quality problems, transients, long duration voltage variation, short duration voltage variations, voltage imbalance, waveform distortion, power quality terms.	06
2	Voltage Sags and Interruptions: Sources of sags and interruptions, estimating voltage sag performance, fundamental principles of protection, motor starting sags.	06
3	Power Quality Solutions: Power Conditioning Equipment, Surge Suppressors, Noise Filters, Isolation Transformers, Line-Voltage Regulators, Motor-Generator Sets, Magnetic Synthesizers, Static VAR Compensators (SVCs), Uninterruptible Power Supply (UPS), Solid-State Switches, Harmonic Filters; Selection of Appropriate Power Conditioning Equipment; Grounding and Wiring. Use of AI in power quality solutions.	06
4	Fundamentals of Harmonics: Introduction; generation of harmonics; types of Harmonics; effect of harmonics on power system and communication network, etc.; THDs; harmonic indices	06

5	Applied Harmonics:- Locating Harmonic Sources, Harmonic Sources from Commercial Loads, Harmonic Sources from Industrial Loads, Principles for Controlling Harmonics, Harmonic Studies, Standards of Harmonics	06
6	Mitigation of Harmonics: In-line reactors or chokes, Zigzag transformers, Passive filters, Shunt passive filters, Series passive filters, Low-pass, High pass filter and broadband filters, C filters, Active filters. Use of AI in harmonic mitigation.	06

Course Code: EE4114	Course Name: FACTS Controllers	3	--	--	3

Course Description:

Flexible AC transmission systems are state-of-the-art control and protection systems in the power system. The FACTS Controller course covers the advanced technologies used to enhance the stability, efficiency, grid capacity and performance of electrical power systems. It focuses on various FACTS Controller devices, such as SVC, TCSC, and UPFC that manage voltage, reactive power, and power flow in transmission lines.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Examine the importance of controllable parameters and benefits of FACTS Controllers.
2. Analyze the functional operation and control of series compensation
3. Describe the principles, operation and control of voltage & Phase angle regulator
4. Explain combined & special purpose FACTS controllers
5. Apply AI Techniques for FACTS Controller

Prerequisite: Power Electronics and Power Systems

Course Content		
Unit No	Description	Hrs
1	FACTS Concepts: Opportunities for FACTS, Power Flow in an AC System, Transmission line Loading Capability, Importance of Transmission line Controllable Parameters, Basic Types of FACTS Controllers	06
2	Static Shunt Compensators: Objectives of Shunt Compensation, Stability Analysis, Methods of Controllable VAR Generation – TSC & TCR, Static VAR Compensators (SVC), Static synchronous compensator (STATCOM), Comparison Between STATCOM and SVC	06
3	Static Series Compensator: Objectives of Series Compensation, Stability Analysis, Variable Impedance Type Series Compensators – GCSC, TSSC, TCSC, Switching Converter Type Series Compensators – SSSC	06
4	Static Voltage & Phase angle Regulators: Objectives of Voltage and Phase Angle Regulators, Thyristor-Controlled Voltage and Phase Angle Regulators (TCVRs and TCPARs), Switching Converter-Based Voltage and Phase Angle Regulators, Hybrid Phase Angle Regulators	06

Course Code: EE4174	Course Name: Smart Grids	3	-	-	3

Course Description:

The course deals with smart grid introduction, technologies, communication and applications of renewable sources for developing smart grid

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Apply Smart Grid concepts to analyze modern power distribution challenges.
2. Develop smart grid architecture
3. Explain various smart grid technologies
4. Identify communication and information technologies for smart grid
5. Illustrate the operation of Smart Metering and Distribution Automation systems in practical distribution networks.

Prerequisite: Mathematics - linear algebra, differential equations; Control Systems - linear system, state-space

Course Content		
Unit No	Description	Hrs
1	Introduction to smart grid: Basics of power systems, definition of smart grid, need for smart grid, smart grid domain, enablers of smart grid, smart grid priority areas, regulatory challenges, smart-grid activities in India, Comparison between smart grid and micro grid.	06
2	Smart grid architecture: Smart grid architecture, standards-policies, smart-grid control layer and elements, network architectures, IP-based systems, power line communications, supervisory control and data acquisition system.	06
3	Communication technology in smart grid: Introduction to Communication Technology, Two Way Digital Communications Paradigm, Synchro-phasor Measurement Units (PMUs) – Wide Area Measurement Systems (WAMS), Power quality by use of smart meters, Communication Protocols	06
4	Information technology in smart grid: Data communication, Dedicated and shared communication channels, Switching techniques- Circuit switching, Message switching, Packet switching, Standards for information exchange, Information security for the Smart Grid, IOT for Power systems, home	06

Class: - Final Year. B. Tech	Semester-VII	L	T	P	Credits
Course Code : EE465	Course Name : High Voltage Engineering Lab	-	-	2	1

Course Description:

This laboratory course emphasis on imparting the practical knowledge and understanding of basic principles, characteristic, performance and testing of high voltage engineering equipments. The course will orient student to understand the theoretical and practical dimensions. In this lab course, students will be familiar with the use of different equipment's and safety precautions on work place.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Perform experiments on solid and liquid insulating materials to check dielectric strength
2. Analysis of different high voltage AC and DC generation system.
3. Simulate impulse generation system using MATLAB simulation tool.
4. Simulate Partial Discharge Testing with MATLAB simulation tool.

Exp. No.	Description
1	To identify the breakdown voltage of solid insulating materials.
2	To identify the breakdown voltage of liquid insulating materials.
3	Modeling and analysis of high AC voltage generation employing cascade transformer arrangements using MATLAB simulation tools.
4	Simulation for Generation of High DC Voltage – Using MATLAB simulation tools.
5	To simulate Impulse Voltage by voltage dividers and peak voltmeters using MATLAB simulation tools.
6	To simulate Measurement and analysis of partial discharges in cables and transformers using MATLAB simulation tools.
7	To simulate switching surges and lightning impulses using MATLAB simulation tools.
8	To simulate insulation coordination in power systems with MATLAB simulation tool.
9	To simulate power frequency withstand and breakdown voltage of cables with MATLAB simulation tool.
10	To simulate Flashover and puncture tests on pin/post insulators with MATLAB simulation tool.

Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

Class: Final Year B. Tech.	Semester-VII	L	T	P	Credits
Course Code: EE467	Course Name: Power Quality and Harmonics Lab	--	--	2	1

Course Description:

This course focuses on the practical understanding and analysis of power quality issues caused by nonlinear loads and transient conditions in electrical systems. Students will explore key phenomena such as voltage sag, swell, flicker, and harmonic distortion through experimental setups and simulations. The course covers methods to mitigate current harmonics using filters, the effects of capacitor switching transients, and the impact of unbalanced and nonlinear loads in three-phase systems.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Analyze the impact of nonlinear loads on power quality under various conditions.
2. Demonstrate voltage and current distortions in LED loads and their mitigation.
3. Design and evaluate filters to reduce current harmonics in electrical systems.
4. Study capacitor switching transients and their effects on the power network.

Prerequisite: Electrical Machines Lab, Power Electronics Lab, Control Systems Lab

Expt. No.	Title of Experiment	Hrs.
1	Introduction to different power quality parameter	02
2	Demonstrate various power quality measurement instruments	02
3	Demonstrate voltage sag and swell using Simulink	02
4	Study the neutral current of unbalanced load using Simulink	02
5	Study the Capacitor Switching Transients using Simulink	02
6	Make a use of power analyzer to measure various parameters of load	02
7	Perform detailed harmonic analysis of nonlinear load	02
8	Case study on harmonic filter design	02
9	Demonstrate mitigation of harmonic using filters in Simulink	02
10	Industrial visit to identify and analyze real time power quality issues	02

Class: - Final Year B. Tech	Semester- VII	L	T	P	Credits
Course Code: EE469	Course Name: FACTS Controllers Lab	--	--	2	1

Course Description: 'FACTS Controllers' laboratory is offered as the core course in Electrical Engineering undergraduate program. This course focuses on various techniques of reactive power compensation and voltage support. This course deals with the practical performance, simulation tools on studying of various FACTS Controller devices like Static Var Compensators (SVC), Unified Power Flow Controllers (UPFC), and STATCOMs to enhance the stability and efficiency of power transmission.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain different types of reactive power compensation methods.
2. Illustrate the operation of SVC compensation
3. Describe the operation of VSI in UPFC for reactive power compensation.
4. Demonstrate STATCOM for voltage support in power systems.
5. Apply intelligent control techniques such as Fuzzy Logic and Artificial Neural Networks to FACTS devices

Prerequisite: Power System, Power Electronics, MATLAB/ Simulink.

Expt. No	Title of Experiment	Hrs.
1	To demonstrate three phase voltage source inverter operation	02
2	To analyze dynamic response of the SVC for voltage regulation	02
3	To perform Power flow operation of Thyristor Controller Reactor (TCR)	02
4	To perform Power flow operation of Thyristor Switched Capacitor (TSC)	02
5	To demonstrate a steady-state operation of a 100-Mvar STATCOM on a three-bus 500-kV system for voltage support	02
6	To analyze improvement of transfer power capability using TCSC for a long transmission line	02
7	To perform Power flow control using a Unified Power Flow Controller (UPFC) for a 500 kV transmission system	02
8	To analyze transient stability analysis of multi-machine systems with Power System Stabilizers (PSS) and Static Var Compensator (SVC).	02
9	To design and implement a Fuzzy Logic Controller (FLC) for STATCOM to improve power flow and system stability.	02
10	To develop an ANN Controller for UPFC to enhance Power Flow and system stability.	02

Class: - Final Year B. Tech	Semester- VII	L	T	P	Credits
Course Code: EE471	Course Name: Smart Grids Lab	--	--	2	1

Course Description:

'Smart Grid' laboratory is offered as the core course in Electrical Engineering undergraduate program. The Smart Grid Lab aims to answer energy transition-related queries. Direct management of energy generation and consumption, particularly electrical energy, has become essential as a result of the energy shift. This course addresses opportunities of integration of renewable energy sources with conventional grid using smart meters.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Comprehend understanding of smart grid structures, components, and their role in modern power systems
2. Analyze and simulate power flow in renewable energy systems and grid integration
3. Analyze and evaluate parameters of electric vehicle batteries using advanced battery management systems
4. Simulate and analyze microgrid systems and understand vehicle-to-grid applications for frequency regulation and power quality improvement
5. Explore smart grid sensors, instruments, and SCADA systems in real-time

Prerequisite: Power System, Power Electronics, MATLAB/ Simulink.

Expt. No	Title of Experiment	Hrs
1	Study of smart grid structure and components	02
2	Demonstration of power flow with wind power generation	02
3	Demonstration of power flow analysis on 250W solar PV system	02
4	Analyze various parameters of electric vehicle battery using Smart BMS application.	02
5	Demonstration of a 100kW grid connected PV array	02
6	Simulate and analyze a small scale microgrid system for 24 hours	02
7	Demonstration of a vehicle-to-grid system for frequency regulation in microgrid system	02
8	Demonstration of harmonics mitigation by using capacitor bank	02
9	Demonstration of grid connected 300kWp solar rooftop project	02

K.E. Society's
Rajarambapu Institute of Technology, Rajaramnagar
(An Empowered Autonomous Institute, affiliated to Shivaji University, Kolhapur)
Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

10	Study of smart grid sensors and instruments	02
11	Visit to substation automation (SCADA) center	02

Class: -Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: EE473	Course Name: Solar and Wind Energy Systems Lab	-	-	2	1

Course Description:

This laboratory course emphasis on imparting the practical knowledge and understanding of basic principles, characteristic and Performance and testing of Solar and Wind technology. The course will orient students to understand the theoretical and practical dimensions. In this lab course, students will be familiar with the use of different equipment's and safety precautions on workplace.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Prepare report on renewable energy resource assessment
2. Demonstrate the operating characteristics of PV modules
3. Demonstrate the effects of tilt angle and shadowing on PV modules
4. Operate and maintain squirrel cage and DFIG based wind generation systems
5. Demonstrate the important of tip speed ratio for standalone wind turbine system

Exp. No	Title of Experiment	Hrs
1	To prepare the report on renewable energy potential in India.	02
2	To plot I-V & P-V characteristics for P-V module.	02
3	To demonstrate I-V & P-V characteristics for series and parallel P-V module.	02
4	To study the effect of variable tilt angle on PV module.	02
5	To demonstrate effect of shading on PV module output power.	02
6	To calculate power flow in PV system with DC load.	02
7	To prepare the report on working system of 300 kWp solar system at RIT.	02
8	To analysis effect of wind speed on wind farm output power.	02
9	To understand Wind generation emulation using induction motor acts as Induction generator.	02
10	To study tip speed ratio at different wind speed.	02

Class:-Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code : EE475	Course Name: Electrical Vehicle and Drives Lab	-	-	2	1

Course Description:

This course aims to demonstrate the knowledge of Electrical Machines, Power Electronics, and Control Systems practices to various industrial applications where motion control is required. Student may extend the knowledge and skills through this course in robotics, electric drive trains, lifts, elevators and electrical vehicles

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Analysis performance of electric vehicle in the form of power, torque, and weight
2. Demonstrate AC and DC drives, fed from various power electronics converters
3. Examine closed loop control of electrical drive system
4. Analyze performance of electrical drives by plotting speed-torque characteristics
5. Compare performance of electrical drives using speed-torque characteristics

Prerequisite: Electrical Machines Lab, Power Electronics Lab, Control Systems Lab

Expt. No.	Title of Experiment	Hrs
1	Introduction to Wiring harness of two-wheeler electric vehicle	2
2	Study the system voltage and current across the vehicle components	2
3	Analyze battery charging/discharging with BMS operation in EV	2
4	Analyze performance of PMSM motor under variable load condition	2
5	Demonstrate regenerative braking impact in electric vehicle	2
6	Perform fault diagnosis and troubleshooting in electric vehicle	2
7	Demonstrate Power to weight ratio analysis of EV drive train	2
8	Demonstrate working of 3-phase half converter fed DC drives	2
9	Demonstrate working of 3-phase full converter fed DC drives	2
10	Demonstrate working of Chopper motor controller as DC series drive	2
11	Demonstrate working of Chopper controller using MOSFET	2
12	Demonstrate working of Four quadrant operation of DC motor drive	2
13	Study (V/f) scheme for 3-phase induction motor drive	2
14	Study Vector Control (FOC) of induction motor drive	2
15	Study Slip Power Recovery (SPR) scheme for 3-phase IM drive	2
16	Demonstrate working of BLDC Motor Drive	2

Class: - Final Year B. Tech	Semester-VII	L	T	P	Credits
Course Code: EE4594	Course Name: Capstone Project Phase-II	--	--	6	3

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Devise sound technical knowledge, for identified problem of project.
2. Propose engineering solutions to complex problems.
3. Demonstrate the skills and attitude in a professional way in a team.
4. Illustrate the component and cost optimization solutions wherever applicable.
5. Develop skills towards the use of modern tools and presentations.
6. Justify outcomes through simulation/ experimentation in an environmental and sustainable way.
7. Summarize project report in an ethical way.

General guidelines:

The capstone project phase-II of this semester carries 6 credits. The majority of project work shall be in VII semester. The project group from project phase-I will continue to work on the project selected during VI semester and submit the completed project work to department by the prescribed date usually two weeks before the end of VII semester as mentioned below:

1. Executed project
2. Project report

The capstone project phase-II report should be prepared using the format provided. Students should complete regularly progress work and get the approval from DPC.

Project evaluation:

The students shall be evaluated individually and group wise for his/her project through the quality of work carried out, the novelty of the concept, the report submitted and presentation etc.

The ISE evaluation of capstone project phase- II will be carried out for 50%. The assessments are carried out as per the rubrics given to the guides.

The ESE evaluation will be done as per schedule given by COE for 50%, where students have to present their entire project work carried out throughout the Sem-VI and Sem-VII. The evaluation will be done by panel of examiner containing guide and a faculty appointed by DPC.

Class: - Final Year B. Tech	Semester-VIII
Course Code: OE4382	Course Name: Finance for Engineers (Online Course)

L	T	P	Credits
2	-	--	2

Course Description:

In today's workplace, it is nearly impossible for an engineer to perform without considering the financial impact of every action on the organization's bottom line. Engineers need to be aware of issues such as cost reduction and capital investment and how their decisions can affect the financial statements. This course introduces basic financial management to engineers and technical personnel who need this knowledge to manage a profit center effectively. The course aims at providing students with an in-depth coverage of the various aspects of financial management.

It covers the assessing the financial health of the organization through ratio and cash flow analysis, sources of long term as well as short term finance. Decisions concern with financing, working capital and long term investment. Class will focus on both the academic theories underlying the management of funds and the practical aspects of financial management.

Course Learning Outcomes:

After successful completion of this course, students will be able to,

1. Discuss the fundamental aspects of accounting and finance.
2. Apply theoretical knowledge and information for preparing various financial statements.
3. Analyze the financial information for solving managerial problems.
4. Evaluate financial performance of the organization for effective decision making.

Prerequisite: Basics of Mathematics

Course Contents		
Unit No	Description	Hrs.
1.	Finance Terminologies & Financial Statement: Key terms of Accounting and Finance, Accounting Principles underlying Preparation of Financial Statements	4
2.	Analyzing Health of a Firm: Techniques of Analyzing Health of a Firm, Classification of Ratios – Liquidity, Leverage, Activity, Profitability, Analysis of Cash Flows	4
3.	The Management of Working Capital: Need of Working Capital, Operating Cycle of Working Capital, Determinants of Working Capital, Preparation of Working capital statement	4
4.	Investment Decision Rules: Investment Decision Rules, Evaluation Criteria for Investment Decision: Payback, ARR, NPV, PI & IRR, Decision Tree Analysis	4

5.	Long Term Financing: Long Term Financing: Shares, Debentures, Loan capital, foreign capital, FDI, Euro issues & external borrowings, Venture capital financing.	4
6.	Financing Decisions and Cost of Capital: Risk & Return, Cost of Capital, Cost of Equity, Cost of Debt, Weighted Average Cost of Capital	4

Note: - Being online course, lecture videos of each unit will be made available through college platform to the students. For each unit there will be separate assignment. Students need to submit all assignments within specified time.

Weightage: 25% weightage for unit wise assignments + 75% weightage for final exam.

Final exam will be held at college campus.

Class: - Final Year B. Tech.	Semester- VIII	L	T	P	Credits
Course Code: OE4362	Course Name: Engineering Management & Economics (Online Course)s	2	-	-	2

Course Description:

Engineering management is the integration of management principles with engineering practices. It is a specialized field that focuses on effectively leading engineering teams and managing technical projects. This course is structured into two key modules: Engineering Management and Engineering Economics. The first module is centered on building the managerial skills necessary to guide, mentor, and inspire technical professionals in their engineering roles. The second module delves into engineering economics, a vital area for engineering firms to maintain their competitive advantage and market presence, focusing on economic decision-making.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Develop administrative, organizational, and planning skills to effectively manage and execute engineering projects.
2. Create bar charts and milestone charts to track and manage project progress.
3. Analyze profit and cost data, conducting economic evaluations to make informed, optimal decisions.
4. Calculate depreciation using various methods.

Prerequisite: Basics of Mathematics

Course Content		
Unit No	Description	Hrs
1	Managerial skills: Theories of Management Principles of Management (by Henry Fayol), Functions of Management, Planning, Organizing, Staffing, Directing, Co-Ordination, Communication, Motivation and Controlling	04
2	Organizational skills: Levels of management, Organizations-elements, types and characteristics of organization, Management by Objectives (MBO)	04
3	Planning Tools: Methods of scientific management- Critical Path Method (CPM), Programme Evaluation & Review Techniques (PERT), Network Crashing, Bar Chart, Mile-Stone chart, Gant Chart	04

4	Methods of Economic Analysis: Economic equivalence, Methods of comparison of alternatives- Present Worth Method, Rate of Return method, Benefit-Cost ratio method	04
5	Make or Buy Decision: Approaches of make or buy decision-Simple cost analysis, Economic analysis, break-even analysis, Payback analysis	04
6	Depreciation: Methods of Depreciation- Straight line method, Declining balance depreciation, Sum of years digits method, sinking fund method, service output method	04

Weightage: 25% weightage for unit wise assignments + 75% weightage for final examination.

Class: - Final Year B. Tech	Semester-VIII
Course Code: IP4024	Course Name: Industry Internship & Project

L	T	P	Credits
-	-	--	12

Course Description:

Internship is designed to expand the depth and breadth of academic learning of students in their particular areas of study. It is an opportunity for students to receive experience in applying theories learned from the classroom to specific experiences with the community and work world. An internship can also heighten awareness of community issues, motivate students to create opportunities, embrace new ideas, and give direction to positive change. A successful internship can give valuable information in making decisions about the direction of future studies or employment. An internship is an opportunity not only to use and develop industry-related knowledge and skills, but also to enhance some of the skills that are transferable to any professional work setting. Students from Final year B.Tech are eligible to do this internship. Selected candidates by college will be permitted for internship of minimum 20 weeks in 8th semester. During this Internship, it is expected that students should identify the problems arising in the industry related to Engineering, and they have to give the solution to the company.

Course Learning Outcomes:

1. Internship

After the successful completion of the IIP- II the student should be able to

1. Examine the functioning of the company on the terms of inputs, transformation process and the outputs (products and services)
2. Develop an attitude to adjust with the company culture, work norms, code of conduct.
3. Recognize and follow the safety norms, Code of conduct.
4. Demonstrate the ability to observe, analyse and document the details as per the industry practices.
5. Interpret the processes, systems and procedures and to relate to the theoretical concepts- studies.
6. Develop the leadership abilities, communication.
7. Demonstrate project management and finance sense

2. Project

After the successful completion of the project, the student should be able to;

1. Identify the project/problem in the domain of a program relevant for the company.
2. Compile the information to the pertaining to the problem identified.
3. Analyse the information using the statistical tools/ techniques.
4. develop the feasible solution for given problem.
5. Analyse the impact of the project on the performance of company/department.

Course Content

I. Internship :

During Internship, Students should follow guidelines given below.

1. After joining the industry students should learn all the departments and their workings. Furthermore, student should understand how each department of industry is interlinked with one another.
2. Student should correlate the theoretical aspects learned in academics with industry practices.
3. Students should gain a knowledge of new technologies which industry follows.
4. Students should follow the professional codes and ethics.
5. Students should follow all rules and regulations of industry. Special care should be taken regarding safety.

• Work Diary:

Work Diary will be provided to each student, which contains details regarding internship, do's and don'ts and evaluation scheme. Student is required to write the Diary regularly and get it signed by the industry guide periodically. During the visit of Mentor, assigned to the student should be able to go through the Diary to access the work done and write the remarks/ instruction. At the end of internship, student should submit the duly completed diary to the department.

• Duration:

The internship duration is of one complete semester (approximately 20 weeks) between 1st January to 30th May of the respective academic year. Biometric attendance on working days is compulsory.

II. Project :

Students should select technical problems occurring within the industry as a project in consult with industry & Institute mentors.

• Evaluation

Faculty Mentor will be assigned to each student by the Institute who will monitor the progress of internship and project and help the student to sort-out any issues/ problems arising. Mentor of student from college will visit the industry as per the schedule given below.

Sr.No.	Evaluation	Period
1.	At the beginning of the program for orienting Students to the company and finalize the project	During 2 nd Week
2.	Review-I (ISE-1)	During 10 th week
3.	Review-II (ISE-2)	During 15 th week
4.	Review-III (ESE)	During 20 th week

*Review-III is end semester examination (ESE), which will be conducted at institute.

*During ESE, students should submit, Project & internship report, Work diary, Internship & project completion certificate issued by industry etc. to respective departments.

K.E. Society's
Rajarambapu Institute of Technology, Rajaramnagar
(An Empowered Autonomous Institute, affiliated to Shivaji University, Kolhapur)
Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

Class: - Final Year B. Tech	Semester-VIII
Course Code: RE4044	Course Name: Research Internship

L	T	P	Credits
-	-	-	12

Course Description:

Research experience for undergraduates is important not only for conducting research on a topic that has an impact on a current research activity, but also as a tool to enhance undergraduate education. For the engineering technology students, research experiences allow them to carry out in-depth study of engineering concepts, while emphasizing hands-on experiences and practical applications. Participating in research projects strengthens the student's resume, and fulfills the requirements of present day employers, who demand sound engineering skills in their employees.

Course Learning Outcomes:

After completion of this course, the student will be able to,

1. Investigate the technical literature.
2. Recognize and evaluate theories, practices, and/or research on a chosen topic by conducting a thorough literature review and submitting a written integrative, critical summary of the current literature.
3. Design a research problem and develop a methodology.
4. Develop and implement an advanced original research or creative project.
5. Develop the ability to explain the conceptual viability of the project and describe the major components involved.
6. Develop advanced discipline-relevant skills and competencies.
7. Write a research report and paper.

Course Content

Students should carefully discuss with their research advisor about time expectations to complete the research project.

Degree to which students meet expectations: The following is a minimum set of expectations for every student enrolled for this course for credit:

- i) perform a background literature search and review,
- ii) Develop a project plan,
- iii) Perform experimental work or applied experimental work,
- iv) Write and present a research report.
- v) Write and submit research paper to any reputed journal/international conference.

- **To submit or publish the research paper in any reputed journal/international conference is a necessary criteria to become eligible for End semester Examination (ESE).**

Quality of the final report and oral presentation: The research advisor will provide clear expectations of the desired format, content, and deadlines of the final report. The research advisors will grade the final report.

Attendance: In order to provide the measure of performance, the research advisor is expected to complete a two mid-term evaluation with the student, accompanied by recommendations for improvement for the remainder of the term. The mid-term evaluation with the student should be accompanied by a one-on-one meeting between the research advisor and the student.

Absences and Make-up Work: Requirements for attendance is as per RR of the Institute

- **Evaluation**

Faculty guide will be assigned to each student by the Institute who will monitor the progress of research project and help the student to sort-out any issues/ problems arising. Schedule of evaluation will be as given below.

Sr.No.	Evaluation	Period
1.	Review-I (ISE-1)	During 10 th week
2.	Review-II (ISE-2)	During 15 th week
3.	Review-III (ESE)	During 20 th week

*Review-III is end semester examination (ESE).

*During ESE, students should submit research Project report, proof of submission of research paper to reputed journal/international conference to respective departments.

*If student is doing research project in outside organization (Research Lab/ institutes), he/she should submit project completion certificate given by outside organization.

K.E. Society's
Rajarambapu Institute of Technology, Rajaramnagar
(An Empowered Autonomous Institute, affiliated to Shivaji University, Kolhapur)
Syllabus of Final Year B. Tech Electrical Engineering
 To be implemented for 2023-27
 Department of Electrical Engineering

Class: - Final Year B. Tech	Semester-VIII
Course Code: ED4104	Course Name: Project Management (Online Course)

L	T	P	Credits
2	-	--	2

Course Description:

To improve and update knowledge of new entrepreneurs in the areas of project preparation & appraisal techniques; decision-making process in the sector of industrial, infrastructure & sustainable opportunities that would lead to improved viability, returns and effective investment decisions. Writing a business plan which can gain interest of the fund providers like venture capitalists and other sources of funding.

Course Learning Outcomes:

- After successful completion of the course, students will be able to,
1. Develop a Comprehensive Business Plan for selected business
 2. Evaluate Project Viability Through Financial Appraisal
 3. Analyze the Environmental and Technical Aspects of a Project
 4. Apply Project Management Techniques
 5. Assess the Commercial Feasibility of a Business Opportunity

Prerequisite: General knowledge of economics & clear concept about own business model.

Course Content		
Unit No	Description	Hrs
1.	Project appraisal -Project Development Cycle, Preparation of feasibility studies, project formulation, screening for pre-feasibility studies, stages of feasibility report preparation, Project Analysis including Market Analysis, Technical Analysis & Financial Analysis, Various analytical techniques and integrating the data gathered into a full-fledged business plan.	04
2.	Project Analysis -Environmental Analysis, Risk Analysis, Infrastructure Development & Financing, Risk Management, Risk identification, Qualitative risk analysis, Quantitative risk analysis, Risk planning and control, National Cost-Benefit Analysis, Financing Sustainable Opportunities. Sustainability and Green Business Practices	04
3.	Business Plan: What is business plan, Entrepreneurial opportunities and Business Plan. Preparing business plan. (Practical Exercises on preparation of business plan) Components of Business Plan, Executive summary, other components. Project report contents.	04
4.	Commercial Appraisal: Economic feasibility and commercial viability, market analysis, Market Research, Industry Analysis, Competitor analysis, defining the target market, market segmentation, market positioning, building a marketing plan, market strategy	04

5.	Technical Appraisal: Operation and Production Plan: Types of production systems, Product design and analysis, New product development, location and layout decisions, project layout, plant and technology choices, product specification and customer needs, production planning and control, Commercializing Technologies	04
6.	Financial Appraisal: pro forma income statements, financial projections, working capital requirement, funds flow and Cash flow statements; Ratio Analysis. Project Management Techniques: Identifying organizational structures Estimating costs and budgeting Using critical path project management tools (WBS, Gantt chart, Project Network Diagram) Establishing the critical path Tracking project milestones Using the program evaluation and review technique (PERT tool) Using process improvement tools (Fishbone, SIPOC) Managing time Controlling quality	04

Class: - Final Year B. Tech	Semester-VIII
Course Code: ED4044	Course Name: Commercial Aspects of the Project (Online Course)

L	T	P	Credits
2	-	--	2

Course Description:

To familiarize students with accounting, mechanics of preparation of financial statements, understanding corporate financial statements, their analysis and interpretation.

The objectives of the course are to build the skills, frameworks and knowledge in entrepreneurial finance. Students will study the financing of small and medium sized businesses & Financial management from the perspective of both the entrepreneur and investors.

This course will also give overall understanding of marketing management which will help them in developing their own marketing decisions & in understanding the importance of market survey techniques. It will help them in conducting suitable market survey for their own selected products.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Interpret basic Accounting and Financial Terminologies.
2. Prepare & analyze financial statements.
3. Apply basic principles of marketing.
4. Apply knowledge of marketing mix for any organization.

Prerequisite: General knowledge of economics & clear concept about own business model

Course Content		
Unit No	Description	Hrs
1.	Accounting Terminologies: Meaning, nature, functions, types of accounting; generally accepted accounting concepts, principles and conventions; double entry system. Accounting Records: Fundamentals of record keeping, the accounting process, Computer-based accounting systems. Accounting cycle.	04
2.	Financial Management – Definition, nature, objectives, functions and scope of financial management, Preparation of financial plan – its objectives, essential features, consideration in formulating financial plan	04
3.	Financial Statements: Balance sheet: assets, liabilities. Income statement: concept of income, concept of expenses, concept of gain and losses. Components of the income statement. Cash flow statements: purpose, components, concept, Process.	04

4.	Nature & Scope of Marketing – Evolution, core marketing concepts, selling concept, marketing concept, Holistic marketing concept, portfolio approach-BCG matrix. Marketing Research- Concept & practice, Steps in Marketing Research.	04
5.	Marketing Environment and STP: Demographic, economic, political, legal, socio cultural, technological environment (Indian context); environmental scanning to discover marketing opportunities, Segmentation, Targeting and Positioning, difference between segmentation, targeting and positioning.	04
6.	Marketing Mix: Product, Price, Promotion and Place. Product Decisions: Concept of Product, Levels of Product, Product Mix Decisions, Product Line Decisions, Individual Product Decisions, Branding, Product Life-cycle - Stages. Pricing Decisions: Meaning, Factors influencing Pricing Decisions, Methods of Pricing Place Decisions: Meaning, Channels of Distribution Promotion Decisions: Elements of Promotion Mix, Advertising, Publicity, Sales Promotion, Personal Selling, Direct Marketing and Public Relations,	04

(An Empowered Autonomous Institute, affiliated to Shivaji University, Kolhapur)
Syllabus of Final Year B. Tech Electrical Engineering
To be implemented for 2023-27
Department of Electrical Engineering

Note:

- Lectures of this theory course will be conducted through online mode.
- Recorded videos will be made available to students on MOODLE platform.
- Faculty will upload three lectures per week and links will be shared on every Monday.
- Students need to appear in Unit Test-1, Unit Test-2 and ESE in college campus as per the regular practice.
- Faculty of concerned course will take the decision regarding modes of In-Semester Evaluation (ISE).

Class: - Final Year B. Tech	Semester-VIII
Course Code: ED4064	Course Name: Entrepreneurship Development Program (EDP)

L	T	P	Credits
-	-	--	1

Course Description:

Student will attend short term intensive EDP program organized either in house or by any authorized agency approved by CIIED.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Apply knowledge of engineering, economics, marketing and finance for formulation of business plan, starting & managing new business.

Prerequisite: General knowledge of business & clear concept about own business model.

Course Content:

1 Student will undergo training programs organized by CIIED.

Programs on marketing, Finance management, project report preparation by professional agencies. Students are required to apply this knowledge for preparing final project report.

2. Student will complete online certification course- **Entrepreneurial & Employability Skill Development Program** by Singapore polytechnic in association with Jugad Funda & Shivaji University, Kolhapur or any other approved agencies.

Evaluation- ISE 50 marks by mentor for-

1. Completion of online certification course- **Entrepreneurial & Employability Skill Development Program** by Singapore polytechnic in association with Jugad Funda & Shivaji University, Kolhapur or any approved agencies.

2. Active participation in programs by completing various activities/assignments in program.

Class: - Final Year B. Tech	Semester- VIII
Course Code: ED4084	Course Name: Entrepreneurial Internship

L	T	P	Credits
-	-	-	11

Course Description:

Student will prepare technically feasible and economically viable detailed project report including market survey.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Apply knowledge of engineering, economics, marketing and finance for preparation of project report.
2. Make commercial, technical and financial appraisal of project.

Course Content

Student will start working on collection of data required for business plan. During semester he may require to visit various support organizations, similar industries, suppliers of raw materials, machinery, special service providers. He has to conduct market survey. For this student can go out of campus with prior permission of mentor. Mentor should maintain this record. Students are required to work independently by taking guidance from mentor/Head CIED/faculty on expert panel of CIED.

Product prototype & execution of business operation is must & it should be validated by Departmental ED committee.

Continuous efforts taken by student should be observed by mentor for ISE evaluation. At the end of semester detailed project report will be presented before Expert committee for ISE evaluation of 100 marks.

Then student will appear for ESE. Project report evaluation & assessment will be done by a panel of experts appointed by COE.

Evaluation	Weightage	Particulars	converted Marks
ISE	10%	Preliminary project report	10
	20%	Market Survey	20
	20%	Completion of Legal Aspects	20
	50%	Final Report	50
ESE	100%	ESE -Final Report	100

Class: - Final Year B. Tech.	Semester- VII
Course Code: REH401	Course Name: Intellectual Property Rights

L	T	P	Credits
-	-	-	2

Course Description:

This course provides a comprehensive introduction to the principles and practices of Intellectual Property Rights (IPR) with a focus on their application in the fields of science, technology, and engineering. Students will explore the various forms of intellectual property, including patents, copyrights, trademarks, trade secrets, and industrial designs, and understand their legal, economic, and ethical implications. The course covers the process of securing and enforcing IP rights, the role of international agreements and organizations, and the challenges posed by emerging technologies. Through case studies, practical exercises, and discussions, students will gain the knowledge and skills necessary to protect and manage intellectual property in a globalized and innovation-driven world.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain the basic concepts and importance of Intellectual Property Rights.
2. Identify different types of intellectual property and their relevance in the technology sector.
3. Analyze the legal aspects of IPR and its implications for innovation and business.
4. Apply IPR principles to protect inventions, designs, and creative works.
5. Evaluate the ethical and societal impact of IPR in a global context.

Prerequisite: Write prerequisite required to study this course.

Course Content		
Unit No	Description	Hrs.
1	Introduction to Intellectual Property Rights: Definition and importance of Intellectual Property (IP); Historical evolution of IPR; Types of Intellectual Property: Patents, Copyrights, Trademarks, Trade Secrets, Industrial Designs, Geographical Indications; Role of IPR in innovation and economic development; Overview of global IPR systems (WIPO, WTO, TRIPS Agreement)	04
2	Patents: Concept of patents and patentability criteria (novelty, inventive step, industrial applicability); Types of patents: Utility, Design, and Plant Patents; Patent application process: Filing, examination, and grant; Patent infringement and enforcement; Case studies on patent disputes in technology sectors; Introduction to Patent Cooperation Treaty (PCT) and international patent filing	04

3	Copyrights and Related Rights: Concept of copyright and its scope; Subject matter of copyright: Literary, artistic, musical, and software works; Rights of copyright holders and limitations (fair use, public domain); Copyright registration and enforcement; Digital rights management and challenges in the digital era; Case studies on copyright infringement in software and media	04
4	Trademarks and Industrial Designs: Concept of trademarks and their importance in branding; Types of trademarks: Word marks, logos, service marks, collective marks; Trademark registration process and infringement; Concept of industrial designs and their protection; Design registration and enforcement; Case studies on trademark and design disputes	04
5	Trade Secrets and Geographical Indications: Concept of trade secrets and their protection; Legal framework for trade secrets (e.g., NDAs, confidentiality agreements); Geographical Indications (GIs): Concept and significance; Protection of GIs and their role in promoting local products; Case studies on trade secret theft and GI disputes	04
6	IPR Management, Ethics, and Global Perspectives: IPR management in technology transfer and commercialization; Licensing and assignment of IP rights; IPR in open innovation and collaborative research; Ethical issues in IPR: Biopiracy, patenting life forms, and access to medicines; Global IPR trends and challenges: Counterfeiting, piracy, and cross-border enforcement; Role of IPR in startups and entrepreneurship; Future of IPR in emerging technologies (AI, blockchain, biotechnology)	04

Class: - Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: REH403	Course Name: Research project (Synopsis) phase-I	-	-	-	2

Course Description:

This course is designed to guide B. Tech. students through the initial phase of their research project, focusing on the development of a comprehensive research synopsis. Students will be introduced to the fundamentals of research methodology, including problem identification, literature review, research design, and ethical considerations. The course emphasizes the formulation of clear research questions, the selection of appropriate methodologies, and the preparation of a well-structured research proposal. Through mentoring sessions, students will learn to conduct systematic literature reviews, design research frameworks, and present their synopsis/proposal effectively. The course aims to equip students with the skills necessary to plan, propose, and defend their research projects, setting a strong foundation for the successful execution of their research in Phase 2.

The evaluation process is designed to assess students' understanding and application of research concepts. It includes in Semester Evaluation (ISE - 50%) and End-Semester Evaluation (ESE - 50%) comprises presentation sessions.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Demonstrate an understanding of research methodology and project planning.
2. Identify a research problem with clear objectives and questions.
3. Conduct a systematic literature review using appropriate sources and tools.
4. Develop a research synopsis with a well-defined methodology and expected outcomes.
5. Present research synopsis/proposal effectively.

Class: -Final Year B. Tech.	Semester- VII	L	T	P	Credits
Course Code: REH405	Course Name: Research-Specific core course-I (Online NPTEL Course)	-	-	-	3

Course Description:

Students can opt for online certification courses and produce certificate.

- The student should select the course in consultation with mentor on NPTEL platform related to project area.
- The course should be minimum 25 hours' duration and should have certification facility.

Students should complete courses and get a certificate. The certificate copy should be submitted to the mentor. The evaluation process is designed to assess students' understanding of core concepts related to project area. It includes in Semester Evaluation (ISE - 50%) and End-Semester Evaluation (ESE - 50%) comprises presentation sessions.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Explain the key concepts and insights gained from the NPTEL course
2. Apply concepts, tools, and methodologies learned from the NPTEL course into their ongoing research project
3. Analyze research-specific problems using the knowledge acquired from the online course.
4. Identify the real life applications and practices of courses studied

Class: -Final Year B. Tech.	Semester- VIII
Course Code: REH402	Course Name: Research project phase-II

L	T	P	Credits
-	-	-	11

Course Description:

This course is designed to guide B. Tech. students through the execution and reporting phase of their research project, building on the foundation laid in Phase I. Students will implement the research plan outlined in their synopsis, focusing on data collection, experimentation, analysis, and interpretation. The course emphasizes the application of research methodologies, tools, and techniques to address the research problem effectively. Through regular mentoring sessions, students will refine their research approach, troubleshoot challenges, and ensure adherence to ethical guidelines. The course also focuses on the preparation of a detailed research report and the presentation of findings.

The evaluation process is designed to assess students' ability to execute their research plan and communicate their results effectively. It includes In-Semester Evaluation (ISE - 50%) and End-Semester Evaluation (ESE - 50%), comprising progress reviews, report submissions, and final presentations.

Course Learning Outcomes:

After successful completion of the course, students will be able to,

1. Apply appropriate analytical tools and techniques to process and interpret research.
2. Identify and address challenges encountered during the research process.
3. Prepare a comprehensive research report detailing the objectives, methodology, findings, and conclusions.
4. Communicate research outcomes effectively through written and oral presentations.
5. Demonstrate ethical guidelines and standards throughout the research process.
